

REPORTE (MVC)

T5 primeCoders: leader: Ricardo Lainez

URL github: <https://github.com/Jeancarlospp/Bocatto.git>

URL web page: <https://bocatto-nu.vercel.app/>

- Payment methods and coupon support

1.5 Order Controller (Backend)

- Order creation from cart
- Order retrieval and status management✓
- Stock and coupon validation
- Order statistics support✓

2. Coupons & reviews

- Create the coupon model in the database✓
- Create the coupon usage tracking record✓
- Create the logic to manage coupons✓
- Create coupon routes on the server✓
- Add coupon fields to orders✓
- Integrate coupon validation at checkout✓
- Add the function to validate coupons from the frontend✓
- Add the coupon input field on the checkout screen✓
- Display coupon discount on order history✓
- Create the admin view for coupon usage
- Create the review model in the database✓
- Create the logic to manage reviews✓
- Create review routes on the server✓
- Create the star rating component✓
- Add the functions to handle reviews from the frontend
- Add the review form for delivered orders✓
- Create the review moderation page for the admin✓
- Create the form for admin to respond to reviews✓
- Display approved reviews on products publicly

3. Reservation & Area Management

BACKEND (18 Tasks)

- ☒ ~~Implement reservation overlap detection algorithm for concurrent bookings~~
- ☒ ~~Create GET /reservations/availability endpoint with date range filters~~
- ☒ ~~Build capacity validation logic (guestCount vs area min/max)~~
- ☒ ~~Add reservation duration constraints (minimum 1 hour, maximum 4 hours)~~
- ☒ ~~Implement automatic status updates (pending → expired after 15 minutes)~~

- ☐ Create GET /reservations/by-location/:locationId endpoint
- ☒ ~~Build conflict resolver for simultaneous booking requests (transaction locks)~~
- ☒ ~~Add PUT /reservations/:id/cancel with refund policy validation~~
- ☒ ~~Implement reservation modification with availability re-check~~
- ☒ ~~Create database indexes for area + startTime + endTime queries~~
- ☒ ~~Build aggregation pipeline for reservation analytics (daily/weekly stats)~~
- ☒ ~~Add location-area relationship validation in reservationController~~
- ☒ ~~Implement webhook notifications for reservation status changes~~
- ☒ ~~Create GET /areas/by-location/:locationId endpoint with availability~~
- ☒ ~~Add reservation history archival (completed reservations older than 90 days)~~
- ☒ ~~Build payment method integration validation~~
- ☐ Implement reservation confirmation email trigger system
- ☒ ~~Add comprehensive input sanitization and error handling~~

FRONTEND (17 Tasks)

- ☒ Build interactive calendar component showing area availability by date
- ☒ Create multi-step reservation wizard (select area → choose time → guest details)
- ☒ Implement real-time capacity display (e.g., "8/12 seats available")
- ☒ Design admin reservation management table with filters (status, date, area)
- ☒ Build time slot picker with 30-minute intervals and disabled unavailable slots
- ☒ Create reservation confirmation modal with booking summary
- ☐ Implement drag-and-drop reservation rescheduling in admin panel
- ☒ Build area card gallery with filters (capacity, features, location)
- ☒ Create My Reservations page for authenticated users (upcoming/past)
- ☒ Implement reservation cancellation flow with confirmation dialog
- ☒ Build admin area CRUD interface with image upload preview
- ☒ Add location selector dropdown in reservation form
- ☒ Create notification toast system for booking confirmations and errors
- ☒ Implement mobile-responsive design for reservation calendar
- ☒ Build search and filter bar for reservation list (date range, status, user)
- ☒ Add loading states and optimistic UI updates for reservation actions
- ☒ Create accessibility features (ARIA labels, keyboard navigation, focus management)

Clean Code	Report	MVC
